STATUS OF LANDFILL POND - JEE-0214-92

Routine surveillance of the RFP ponds after the recent blizzard found that the pond below the landfill was at 91% of capacity. Evaluation of numerous options to assure that the pond does not overflow has occurred between subject matter experts for both EG&G and your staff. The selected option is to transfer water to Pond A-1, which is a nondischarge pond and has capacity available to accommodate lowering the landfill pond. We have provided the most recent analytical data on the pond water for your submittal to the regulators. We request that you obtain concurrence from the regulators on the transfer before it is initiated.

The pipes and pump required to complete the transfer are in place. We request approval to start the transfer on Monday, March 23rd. Surface Water Division will monitor the pond level over the weekend to assure that any change in pond status can be reported expeditiously.

J-E Evered, Director
Environmental Management
